

Powerproject

The power behind successful projects

Designed to support the way construction planners work

- Easy-to-use but extremely powerful
- Fully scalable so suits projects of all sizes
- Superior presentation and simple printing
- Displays repeated tasks on one row
- Options to integrate BIM models for 4D planning
- Precise scheduling for greater accuracy
- Dashboard reporting for quick executive summaries
- Protection against litigation for delay
- Easy integration with other software
- Simple progress updates on mobile devices

Flexible licensing and deployment options for cost-effective access

Choose the best option for your business:

- Single User Licence (Local)

Simplest licence, with local access on one specific Windows machine only. However, the licence can periodically be transferred to another machine if required.

- Concurrent Licence (Server)

A cost-effective way of letting more users have access to the software by sharing licences on a local server and bringing down the overall cost of purchase considerably.

- SaaS Subscription (Cloud)

As an alternative option to outright purchase, a licence can be taken on subscription (minimum term six months). This allows an individual user to access the software via a Cloud service on a number of platforms.

Getting you started

With many years experience of providing our software solutions to the construction industry, we understand the best ways for you to maximise the benefits and return from your investment in Powerproject through:

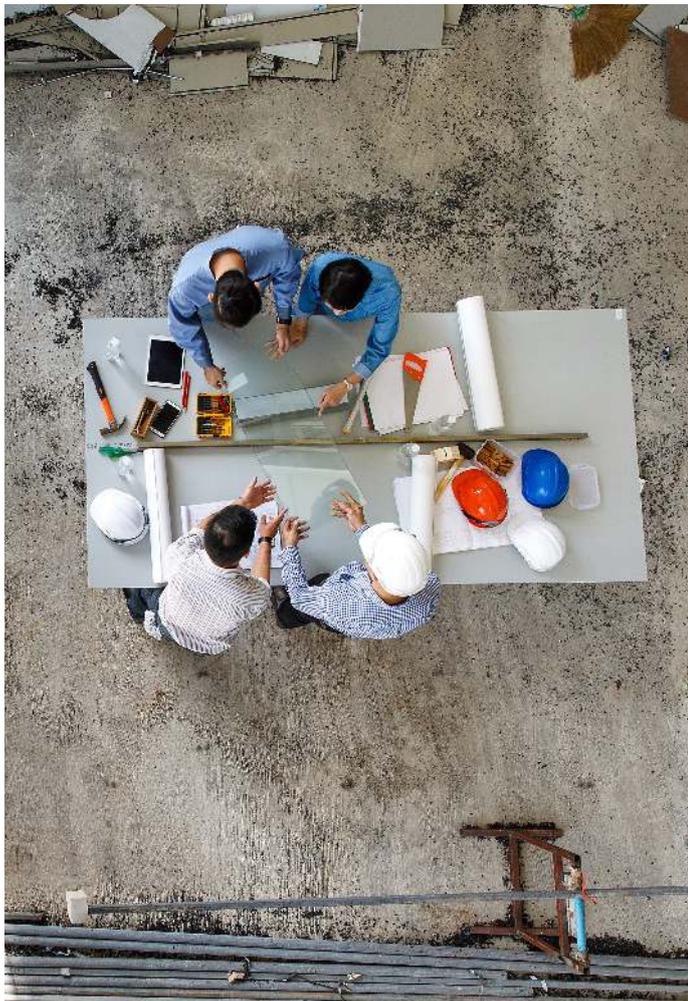

Technical Support

Our support and upgrade package will help you to get the most out of your investment in our software and includes the provision of all maintenance updates and upgrades.

The high quality of our support service is just one of the many reasons that 97% of our client base retain their yearly support maintenance. All supported users have access to an online Support Portal, which contains a comprehensive Knowledgebase, current version downloads, full access to the add-on library and extensive product information.

Flexible deployment options

If you need to scale up your project planning, we can advise you on Enterprise plus web based deployments.

Training

We provide a wide range of training to help both new and more experienced users improve their skills in working with Powerproject.

Courses are held at our Training Centre in Haddenham, Buckinghamshire; at regional locations throughout the UK; or at your own premises. If required, we can tailor courses to your company requirements or provide web based training.

Customised services

Our team of experts can save you time by customising your Powerproject solution. Assignments can be as short as half a day, for tasks such as constructing a project template to simplify project creation and consistency, writing a macro to automate a repeated process – or as long as several weeks for a major organisation wishing to change its project delivery processes and associated management information reporting.

"The presentation of Powerproject is much better than our previous software. This really helps us when talking with our supply chain, customers, and team. It feels like Powerproject has been built for the job in hand, and it works with me rather than me having to struggle to get what I want from the software."

Aaron Pearson, Operations Manager, Willmott Dixon
